

Criterion E: Evaluation

The product was sent to the client on Feb 21st 2018 (See Appendix). I asked my client Ms. Huiting Chen to try all functions against the test plan we agreed on earlier as soon as possible. The next day, Ms. Chen texted me and said she has managed to use all the functions in the final product and sent the test plan with note back in an excel spreadsheet.

Planed Result	Comment
_Users can easily make use of all functions of the product	Home menu (interface) is much to simple, however, it is clear and easy to follow. Not bad as a high school student.
_Successfully add/edit/remove employees and changes are saved	Expectations are met
_Accurately calculate salary from all possible factors	Factors like personal income tax and bonus or overtime could be added as a future development. You can keep trying!
_All the reports are dedicated to client's needs and accurate	
_Reports are neatly formatted.	Expectations are met
_Employee's summary can be traced conveniently	Files can be found within the same package
_Faster in processing data compared to Excel	Not sure, but certainly save more time in the long run
_Compared results to Excel and no errors should be spotted	Expectations are met

Recommendations for Further Development

Ms. Chen suggests that there can be an additional function to record the total overtime in the given month of the employee, which will result in positive adjustment of final salary. More importantly, she mentioned that a lot of elements could be added to the home menu. For instance, the logo of the company could be set as the background. Final, she asked if it is possible to automatically save the file from the previous month and create new files for the current month. The product of solution would make her job much more convenient that way.
